

1 How do you think this sheet of paper was produced?

2 What else do trees provide us with?

3 What do trees provide for other living things?

4 How do trees relate to soil?

5 How does soil relate to earthworms?

6 How do flowers relate to soil?

7 How do bees relate to flowers?

8 **“Ecology is the study of interactions among living things and their environment.”**

9 Why is it important to care for the planet?

10 Why is it important to care for other people?

11 Why is it important to be careful what we use from the planet?

12

Can you find a nearby plant? Smell it.  
Describe the smell to each other.

13

What are the visual similarities between a pine cone  
and a fern leaf?

14

When did you last lie in long grass? How did it make you feel?  
Take a minute to recall the memory, close your eyes if it helps.

15

Grab a handful of soil in one hand, and with your other hand,  
write a list of words that come to mind in no particular order  
while you hold it.

16

If you could rename our planet, what would you call it?

17

Can you share with each other what other living things are  
present in your school (both indoors and in the school grounds)?

18

What can we learn from other living things?

19

Can you write a new school rule that values the  
importance of other living things?

20

What changes could you make in your school grounds  
to increase the range of other living things?

21

**“Biodiversity — short for biological diversity — is the  
variety of all living things.”**

22

Is there one small action you can commit to doing that will help your  
environment before you go to sleep tonight? Write it down and tell  
someone else what you did the next time you see them.
